

SIMSON[®]

Modern business property with fire safe façade

Reference sheet construction firm
Van den Boogaard, Geldermalsen, the Netherlands

Construction firm Van den Bogaard had outgrown its building in Meteren. In 2009, the company decided to realize a new building themselves on the industrial estate 'Hondsgemet' in Geldermalsen. They built it fully according to their own design. By being the first in the Netherlands to install Rockpanel cladding boards with the elastic Simson Rockpanel Tack-S Adhesive system, the façade already meets the highest European demands for fire safety and durable adhesion. "We are proudly enjoying our new premises, without any care about fire safety and durability of the facade", according to general manager Eric van den Bogaard.

Building

- Location: Geldermalsen, the Netherlands
- Enterprise: construction company
- Website: www.bouwbedrijf-bogaard.nl

Project details

- Principal:
Van den Bogaard Holding, Meteren
- Building contractor:
Bouwbedrijf Van den Bogaard, Meteren
- Architect:
Bouwbedrijf Van den Bogaard, Meteren
- Completion: 2009
- Gross surface wall cladding: 200 m²

In Meteren the construction firm Van den Bogaard was situated on different locations. "That was not what we wanted so we started to search for a new location for our company", tells Van den Bogaard. "We found it on the new industrial estate 'Hondsgemet' in Geldermalsen. We made the design for the building ourselves. We wanted to apply as many products as possible; these products are products that we have already used in our other construction projects. So we choose for Rockpanel boards which are not fixed with screws but with Simson Rockpanel Tack-S". ▶

Simson Rockpanel Tack-S is included in the European Approval of Rockpanel.

Construction firm Van den Bogaard

Very fire safe and durable

Bostik developed this unique adhesive system specifically for the bonding of Rockpanel boards. "The total system of panels and adhesive complies to Euroclass B, so it is very fire safe indeed. The total system complies to the very strict European Technical Guideline which is absolutely unique on the market", says product development manager John Relou of Rockwool Rockpanel B.V. "Thus it meets the high demands on durable adhesion. With this system we are the first and currently the only one who can meet these stern demands. So we are all set for the future".

Pleasant processing

Construction firm Van den Bogaard applied the Rockpanel boards themselves using Simson Rockpanel Tack-S. Eric van den Bogaard: "First, we applied a strip of Rockpanel Colours on the timber frame. Then we have bonded the panels. Simson Rockpanel Tack-S adheres very well but at the same time it is also elastic and nice to work with. Thus we were able to produce many metres in a short time. Now, we are proudly enjoying our new building, without any care about fire safety and durability of the facade". ■

In this project the following Simson products were applied:

- Simson Rockpanel Tack-S
- Simson Primer MSP
- Simson Liquid 1
- Simson FoamTape

"Tack-S adheres very well but at the same time it is also elastic and nice to work with. Now we are proudly enjoying our new building, without any care about fire safety and durability of the façade."
